

Learning Topic: Job Safety Analysis - JSA

Course Name: Job Safety Analysis – JSA.

Reference Code : SAF 323

Description:

- One way to prevent workplace injuries is to establish proper job procedures and train all employees in safer and more efficient work methods. Establishing and conducting a job safety analysis can identify existing or potential job hazards (both safety and health), and determine the best way to perform the job or to reduce or eliminate these hazards.
- This training takes you through step-by-step in developing effective JSA for any task you perform.

Course Objective:

Upon completion of this course, attendees will be able to:

- Understand JSA's relation to continuous improvement in your organization
- Identify the key requirements for a successful JSA
- Recognize the hazards inherent in task performance
- Develop appropriate solutions and hazard controls
- Perform a JSA with colleagues, contractors, etc. to finish a task safely
- Use the perform JSA to develop an effective procedure for the job

Program Methodology:

This interactive training/workshop provides intense learning opportunities provided through wide ranging discussions, presentations, related videos, group workshops, etc. The course characterizes sustained interest, enthusiasm and participation displayed by the participants throughout the program.

Who Should attend?

- This course is for anyone involved in operations and maintenance that needs to know how to perform JSAs of new or existing tasks.
- In addition, full-time safety practitioners, safety committee members, safety coordinators, safety specialists, human resources, safety managers, loss control managers, and operations managers can benefit from this course
