

Learning Topic: Security Management

Course Name: Security Management

Reference Code : SAF 331

Description:

An organization can either incorporate security guidance into its general project management processes or react to security failures. It is increasingly difficult to respond to new threats by simply adding new security controls. Meeting security requirements now depends on the security management that coordinates actions of multiple security devices, applications and supporting infrastructure, end users, and system operations.

This training provides the best tool for realistically preparing the security management to deal effectively with a wide range of situations. It will also assist security managers in developing more effective and realistic security programs

Course Objective:

At the end of the training, successful delegates will:

- Be able to understand the fundamental issues of the Security System in industrial setting
- Develop strategies for Security Vulnerability Analysis (SVA)
- Gain a broader understanding of the principles of asset protection in the interest of the employees and visitors
- Be able to develop a comprehensive and effective departmental security management system.
- Be able to assess and deal with Insider Security Threats
- Be able to improve the quality of job performance of protection by applying high level of security practice
- Be able to deal with various issues and special situations (threats, non-compliance, environmental, etc.)
- Efficiently communicate with all concerned parties and individuals.
